

FOR IMMEDIATE RELEASE

HELM Analytics™ and TestSoft, Inc. team up to provide Quality Control and component testing solutions for manufacturers

- HELM360 Suite™ and Explicore™ increase product quality and process efficiency for manufacturers -

POWAY, CA, February 18, 2010 –

TestSoft, Inc. and HELM Analytics have teamed up to provide manufacturers with comprehensive manufacturing quality control, production process and supply chain management tools.

HELM Analytics system integration and data capture capabilities coupled with TestSoft's Explicore™ software provide powerful solutions to increase manufacturing efficiency and identify cost cutting measures. Explicore™ software, a lean Six Sigma based tool, is a Data Analysis Scorecard Utility that provides professionals with a powerful, reliable, and easy-to-use utility to fully analyze data and manage large and complex projects. Customers use a data parser as part of Explicore™ to capture data more efficiently and effectively. Explicore™ automatically characterizes successful and failed test data providing a solid evaluation of the manufacturing process. TestSoft's patented process enables users to quickly capture, characterize, analyze, assess and measure product parameters. This enables users to determine the reliability of their processes and products avoiding costly design and testing mistakes and production downtime.

Explicore™ enables manufacturers to augment existing quality controls and proactively monitor process quality and testing parameters. As part of a comprehensive solution HELM Analytics also provides manufacturers with the capability to capture, track and report on key performance indicators along the customers supply chain. The ability to integrate process efficiency, quality control and business intelligence creates a powerful total solution for manufacturers.

Leveraging these solutions creates cost savings, increases efficiency and ensures product quality is supported throughout the manufacturing process. Design flaws and testing issues can be identified early in the process and adjustments can be made quickly limiting cost overrun and production downtime. Developing cost saving initiatives is critical. HELM solutions help manufacturers track customer orders, production information and historical use to provide an overview of the total customer relationship and create opportunities for additional sales or product placement. Integrating disparate systems and providing a single access point for comprehensive business information creates opportunities and positions manufacturers to capture both operational and supply chain actionable data to help drive their business forward.

HELM Analytics and TestSoft, Inc. solution help cut internal costs and maximize production efficiency.

About HELM Analytics™ – HELM Analytics™, a division of CCS Global Tech delivers Comprehensive Enterprise Applications powered by Business Intelligence solutions. The company automates business processes and workflows within complex supply chain relationships. Our solutions include compliance, predictive analytics, data security, regulatory automation, reporting, and enterprise-wide business analytic capabilities for companies of all sizes. About TestSoft, Inc.

TestSoft delivers problem-solving technologies through software, training, and comprehensive services. The company also provides automated data capture and characterization to the customer when and where they need it most. TestSoft delivers world-class service and customized support solutions designed to reduce costs and uncertainties associated with managing, manufacturing products and components. Our services are designed to help solve specific problems encountered during the manufacturing process.
