Database Developer

JOB DUTIES:

Responsible for the following Job Duties:

Meet with business analyst and client subject matter experts to learn the system requirements, data models, data values, and data maintenance scenarios. Analyze requirements to design and develop meta data based (flexible) solutions. Design, implement and maintain advance SQL queries, procedures, scripts, objects including tables, primary and foreign key relationships, triggers, constraints, etc. Create and maintain internal applications to support meta data used to drive the client delivered applications. Work closely with project team and provide support to data modelers, application developers, business analysts, testers and project manager. Document data transformations from external sources to internal destinations. Create and maintain architecture design documents. Create and execute unit tests to test database code as well as Visual Studio c# code. Perform database builds and deployments on multiple environments for multiple releases, such as Development, Test and Production. Coordinate with off-site centers and vendors for deployments and problem resolution. Estimate work efforts and track progress, risks and remaining efforts on assigned tasks. Monitor production processes to ensure timely and error-free operations

REQUIREMENTS:

– Travel/Relocation to client site locations as needed with expenses paid by employer.

QUALIFICATIONS:

– Bachelor's Degree in Computer Science; Information Technology, Engineering or related. Foreign equivalent of Bachelors' Degree in CS, IT, Engnrg, or related field are okay.

SALARY:

$94,765.00 per year: 40 hours per week: 8:30 a.m. to 5:30 p.m.

WORK LOCATION:

13475 Danielson Street, Suite 220,
